QMIS ERP

Email Setup — Simple Guide for the School

Queen Mira International School

A short note for school leaders and office staff (non-technical)

No passwords or secret keys are included in this file.

In one sentence

We need the school's official email address and email service so QMIS ERP can send important messages (like fee receipts and login codes) to parents and staff automatically.

1. Why do we need email?

Today, many messages still need to be shared by hand (phone, WhatsApp, or personal email). With school email connected to QMIS ERP, the system can send the right message to the right person at the right time—from the school's own trusted address.

Already true in the project: The software is ready to send email once the school gives us the official sender address and email service details. Until then, email stays off or in safe test mode—so nothing goes to real parents by mistake.

2. What emails will the school send?

These are the main messages we suggest. You can approve a shorter list for Phase 1.

- **Login / security:** one-time codes, password reset, first-time login help
- **New accounts:** welcome notes when staff or parent logins are created
- **Admissions:** confirmation after a child's admission or enrolment
- **Leave:** when leave is applied, approved, or rejected
- **Announcements:** important school notices also sent by email
- **Tasks:** reminders when work is assigned or overdue
- **Fees:** fee reminders, payment confirmation, and receipt copies
- **Later (optional):** TC updates, escalation alerts, exam / result notices, transport alerts

Already partly ready: Fee notices and login OTP are prepared in the system. Staff onboarding notices and other modules can use email once you approve the setup.

3. Which email address should send the messages?

Please use a school address that is **not a personal inbox**, so parents do not expect a personal reply to that mailbox.

Suggested format (example only)

no-reply@yourschooldomain.com
You may also choose noreply@…, alerts@…, or erp@… — as long as it belongs to the school.

Please tell us the exact address and the name people should see (for example "Queen Mira International School").

4. What we need from the school

Please fill or confirm these points. Share passwords only through a safe method (not in this PDF).

A. Sender details

- Approved “from” email address
- School domain name (the part after @)
- Friendly name shown in the inbox (school name or “QMIS ERP”)

B. Email service

- Which service you use: school email server, Microsoft 365, Amazon SES, Google Workspace, or another provider
- Who will help with setup (school IT person / vendor name and contact)

C. Connection details (for IT — send securely)

- Server address and port (or the provider’s send settings)
- Whether secure connection (TLS) is required
- Login name for sending, if needed
- Password or app password — **only through a secure channel**, never in this file
- Any extra rule that only allows known school servers to send mail

D. Trust settings for the school domain (IT)

These are standard internet checks so Gmail, Outlook, and others treat school mail as genuine (not spam). Your IT person will know them as SPF, DKIM, and DMARC.

- Confirm the school owns the domain
- Ask IT to add the provider’s trust records (SPF, DKIM, DMARC)
- Name of the IT contact who can update DNS

E. Look and feel

- School logo (if you want it at the top of emails)
- Support phone / email to show at the bottom for parents and staff
- Language: English only, or other languages too

5. Decisions we need from you

- Should login codes go by **email**, **SMS**, or both?
- Exact sender address and display name
- Which email service will you use, and who manages it?
- Which messages are must-have for the first go-live? (We suggest: login/password help, new account welcome, admission confirmation, fee receipt, leave result)
- Should fee and admission mail go only to parents, or also to students when they have email?
- If someone replies to no-reply@…, should we ignore it or forward it to a support inbox?
- Please share 2–3 safe test email addresses for practice sends (IT + admin + one parent test)

6. What happens next?

Step 1 — Before we test

- You return the answers in Sections 4 and 5
- IT shares send settings through a secure channel
- IT completes domain trust records (or books a date with the provider)
- We send sample emails only to your test addresses
- You check: correct sender, clear wording, school logo, useful support contact

Step 2 — Before real parents receive mail

- You approve the sample messages
- We confirm mail is not going to Spam for common providers
- Live settings are placed only on the secure school/server environment
- We agree who gets alerted if sending fails
- We choose a go-live date; test mode is turned off only after your approval

Please remember

Do not put passwords, API keys, or secret codes into this PDF or a normal email. Use a password manager, encrypted note, or IT ticket instead.

Please send your answers and the IT contact name to the QMIS ERP project team. We will book the email practice tests as soon as Sections 4 and 5 are complete.

— End of note —
